

## Cost Advantages

- Second and third reinsertions possible without peel back reducing catheters consumed
- Extended indwelling period leading to fewer catheters consumed
- Fewer complications minimizing risk of thrombosis while reducing medication costs

## Patient Advantages

- Minimal trauma, intimal irritation and risk of Phlebitis
- Penetration force is 30% lower than PTFE Catheters
- Softens in vivo on contact with blood
- Volex is more flexible than PTFE for easy cannulation

## Cathy with Volex Superiority

Blood flow rate is not restricted due to even pressure of wings and hollow profit at base of wings

Three facet cut needle point enables gentle insertion & less tissue trauma

Flash back chamber incorporated in hub

Angled and grooved wings helps easy fixation and prevents shifting and rolling of catheter

Volex is radiopaque

Smooth catheter surface and tip reduces thrombosis and accumulation of blood

Color coded wings allow easy identification of sizes
